Notes:
1. The term "Eased Edge" more commonly refers to a slightly radiused profile than a slightly chamfered profile, although the use of the term varies regionally and/or with specific fabricators. In either case, the edge treatment is slight, and normally does not exceed \( R = \frac{1}{4} " \) (1.5 mm).
2. "Pencil Round" generally refers to a radius near that of a standard pencil, approximately \( R = 1/4 " \) (3 to 4 mm).
3. Radius, Chamfer, or Cove edge profile can be any dimension. The actual dimension should be specified at the time of sale. Chamfered are most commonly \( 45^\circ \), although not necessarily so.
4. Many of the profiles shown on this drawing can be done with laminated edge details.
